LOKGESH G R

TECHNICAL SKILLS:

Languages: Java, SQL, Python, PowerShell
Cloud Technology: Amazon Web Services
Frameworks: Spring, Spring Boot
DevOps: CI/CD pipelines, Docker, Kubernetes

WORK EXPERIENC:

Cognizant Technology Solutions: Java Developer Associate Aug 2022 – Present

- Built and maintained scalable REST APIs using Spring Boot to support frontend and third-party integrations, following best practices for versioning and error handling.
- Improved query performance by 40% through JPA/Hibernate optimization, indexing strategies, and query profiling using tools like Hibernate Statistics and slow query logs.
- Migrated a monolithic application into microservices using Spring Cloud, enabling independent deployment and reducing release cycle time by 30%.
- Participated in sprint planning, daily stand-ups, code reviews, and retrospectives, consistently delivering features on time within 2-week sprint cycles.
- Containerized Java applications with Docker, deployed them on AWS (EC2, ECS, RDS), and configured auto-scaling policies to ensure high availability under load.
- Integrated OAuth 2.0 and JWT-based authentication using Spring Security to enforce role-based access control across internal and customer-facing services.
- Reviewed pull requests for correctness, performance, and maintainability while guiding junior developers on design patterns and clean code principles.

INTERNSHIP EXPERIENCE:

Cognizant Technology Solutions Feb 2022 – Jul 2022

- Built RESTful APIs using Spring Boot and deployed them as Docker containers on AWS ECS (Elastic Container Service), enabling scalable and independently deployable service units under senior engineer guidance.
- Implemented file upload and retrieval functionality using the AWS SDK for Java with S3, and connected backend services to a managed PostgreSQL database on AWS RDS with connection pooling via HikariCP.
- Set up CloudWatch dashboards and log groups to track API latency, error rates, and Lambda invocation metrics, and created alarms to notify the team of anomalies via SNS notifications.
- Created JUnit 5 test cases for Lambda handlers and REST controllers, and helped configure AWS CodePipeline with CodeBuild to automate build, test, and deployment stages on every code merge.

PROJECTS:

1. Ecommerce Website - Java Spring Boot & Microservices:

- Designed and built modular microservices for product catalog, cart, orders, and payment using Spring Boot and Spring Cloud. Services communicated via REST and Kafka-based async events, enabling independent scaling and zero-downtime deployments.
- Developed an order management service with idempotent payment processing using Stripe API, secured via Spring Security with JWT authentication and role-based access control for customer and admin roles.
- Containerized all microservices using Docker and orchestrated them with Kubernetes (K8s). Set up a CI/CD pipeline using GitHub Actions to automate build, test, and deployment to AWS EKS, reducing release time from hours to under 10 minutes.

2. AI-powered product recommendation service - Spring AI:

- Developed a recommendation microservice that used OpenAI's API to generate context-aware product suggestions based on user browsing history and purchase behaviour. Integrated the service into the e-commerce backend via a Spring Boot REST endpoint, improving simulated click-through rate by 25% in testing.

EDUCATION:

R.M.K.Engineering College, Chennai Aug 2018 - May 2022
B.E (EEE) CGPA: 8.57/10.00
